Note:
1. Due to product updates, sizes and specifications are subject to change at any time. The tolerance for L is approximately ± 5mm (3/16 in).

2-D Views

With a slim and light aluminium alloy structure, the screen is extremely light and easy to carry. Perfect for those on the move, even the 80" screen only weighs in at 6 kg.

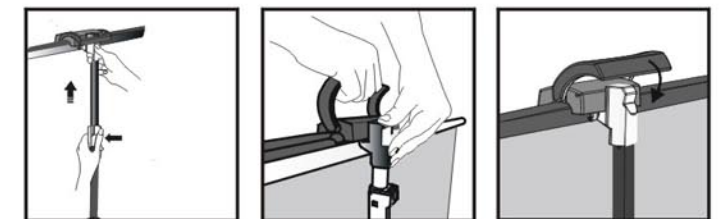

During use, two support legs which are otherwise hidden conveniently slide out from under the casing. The support legs come with height adjustable floor stands for use on uneven surfaces. For additional vertical stability, the support bar comes with an additional height adjustable floor stand.

Intelligent Interlock

The design of the Intelligent Interlock ensures the screen is fully secure during use and transportation. When the support bar is lifted, the case is automatically unlocked allowing the screen to be pulled up. When the screen is retracted back in the casing and the support bar is down, the case will automatically be locked. This innovative safety feature is easy to use and standard for all sizes.

The patented one-way lock allows the back support to be fully secure and easily adjustable. The multi-purpose handle is not only used for pulling and retracting the screen, but it is also used for securing the screen on the support bar. Its perfect fit prevents the screen from falling or shifting positions.
